Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 2-8 are objected to because of the following informalities:

Claim 2, line 3; claim 5, line 2 and claim 6, line 2, "said portion" lacks an antecedent basis.

Claim 3, lines 1 and 2, "at least one of said metallic holding fixture" lacks an antecedent basis.

Claim 5, line 4; claim 6, line 4; claim 7, line 3 and claim 8, line 3, "said base" lacks an antecedent basis.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chan et al. (5,626,482).

Chan et al., figures 1 and 6-7, disclose a connector for connecting circuit boards with each other, comprising:

Art Unit: 2839

- a first connector section (12) disposed on a first circuit board (24) and having contact terminals (44) electrically connected to electro-conductive layer (48) of the first circuit board; and
- a second connector section (14) disposed on a second circuit board (34) and having terminals (42) electrically connected to electro-conductive layer (50) of the second circuit board;

wherein when the first connector section is coupled to the second connector section, metallic engaging portions (82) provided in the first connector section are engaged with metallic portions (88) being engaged having the elasticity provided in the second connector section to hold the first connector section on the second connector section.

Regarding claim 2, figure 6, the engaging portions in the first and second connector sections are nibs (98) and projections (100) of metallic holding fixture, respectively.

Regarding claim 3, the metallic holding fixture is formed in a thin sheet-like form separately from a base (26) for supporting the contact terminals in the second connector section.

Regarding claim 4, the metallic holding fixture having legs (90) fixed to the second printed circuit board (column 5, lines 8-21).

Regarding claims 5 and 6, figure 6, a recess (92) is formed for allowing the portions being engaged in the second connector section to advance/retract at a base of the second connector.

Art Unit: 2839

Regarding claims 7 and 8, the engaging portions of the first connector section are embedded in one piece and fixed in a base (36) of the first connector section.
